

FROM BURNOUT

to Retention: A BPO People Analytics Story

Presented by: Sigma Rose Abordo

The Business Problem

BPO centers face significant challenges, including **high agent turnover** and poor shift performance. Without data-driven visibility, identifying underperforming shifts and teams becomes difficult. This results in an estimated attrition cost of \$25,000 per cycle, demanding immediate attention.

Key Findings

Night Shift

Night shift AHT is **89% higher** than morning shift, averaging **472 seconds** compared to **250 seconds**.

Team Echo

Team Echo holds the **lowest CSAT score** of **1.91** out of **5**, indicating significant performance issues.

Key Findings Summary

FINDING 1:

Night shift agents take 89% longer to handle calls than Morning shift (472 sec vs 250 sec) and deliver the lowest CSAT score of 1.55 out of 5.

FINDING 2:

Team Echo is the lowest performing team with a CSAT score of 1.91 and the highest handle time of 392 seconds.

FINDING 3:

Night shift accounts for 61% of all absences while Morning shift records zero absences.

BUSINESS IMPACT:

Poor shift scheduling and lack of support is costing the BPO in customer satisfaction, productivity, and staff retention. Estimated cost of attrition: \$25,000.

Recommendations for Improvement

Night Shift Crisis

Assign dedicated Night shift supervisors for real-time coaching. Reduce back-to-back call loads and introduce wellness check-ins to address burnout early.

Team Echo Coaching

Launch a 30-day targeted coaching program for Team Echo. Pair low performers with top agents from Team Alpha and Delta. Set a 90-day CSAT improvement target.

Absence Early Warning

Flag agents with 2+ absences per month. Offer Night shift differential pay and flexible scheduling. Target: Reduce \$25,000 attrition cost within 6 months.

Let us take the next step.
